

Static Website Deployment

By – Dilip kumawat

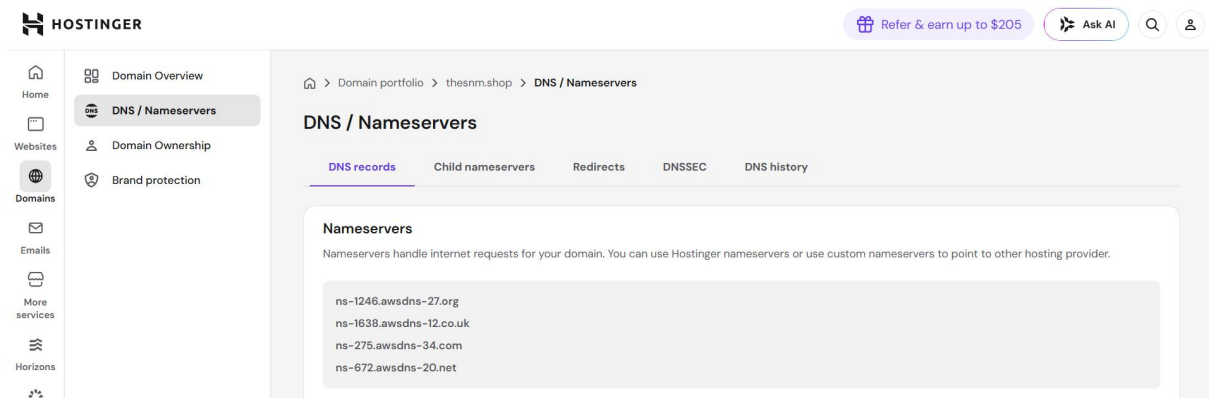

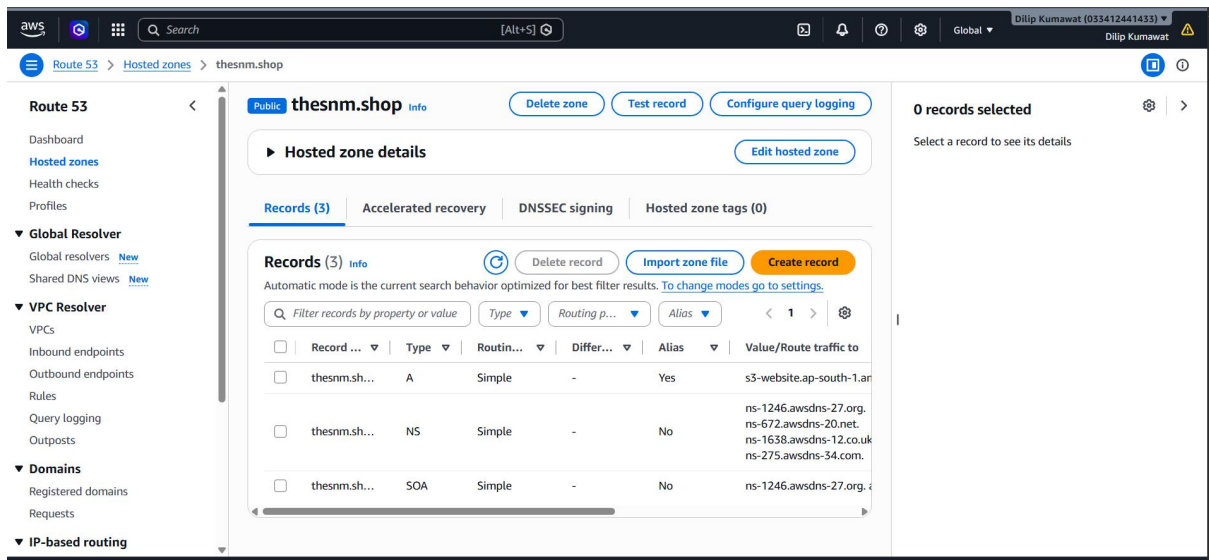

To deploy a static website, we use S3 and route53 services

step1: In S3, create a bucket named like your domain name -thesnm.shop and upload files

and make a public access and edit static website hosting
make sure you upload a index.html .

step2: Go to Route 53 and create a hosted zone for your domain name, then after the snm. shop, create all the NS servers are change them with your domain like
in Hostngir->Domain->NS->change server

after some 12 to 24 hours it will be deployed

step3. In route53

->create record → alias ->enable ->endpoint->alias to s3 endpoint ->

The screenshot shows the AWS Route 53 console interface for creating a new record. The breadcrumb navigation at the top indicates the path: Route 53 > Hosted zones > thesnm.shop > Create record. The main form contains the following fields and options:

- Record name:** A text input field containing 'thesnm.shop'. Below it, a note says 'Keep blank to create a record for the root domain.'
- Record type:** A dropdown menu set to 'A - Routes traffic to an IPv4 address and some AWS resources'.
- Alias:** A radio button labeled 'Alias' is selected.
- Route traffic to:** A dropdown menu set to 'Alias to S3 website endpoint'.
- Region:** A dropdown menu set to 'Asia Pacific (Mumbai)'.
- Endpoint:** A text input field containing 's3-website-ap-south-1.amazonaws.com'.
- Routing policy:** A dropdown menu set to 'Simple routing'.
- Evaluate target health:** A radio button labeled 'Yes' is selected.

At the bottom right of the form are buttons for 'Add another record', 'Cancel', and 'Create records'. Below the form, there is a section titled 'View existing records' with a note: 'The following table lists the existing records in thesnm.shop.'

step 4:-

After some time thesnm.shop will be on the site

The screenshot shows a web browser displaying the QuickBite website. The browser's address bar shows 'thesnm.shop'. The website has a logo for 'QuickBite' and a central white form with the title 'Welcome to QuickBite!'. Below the title, it says 'Enter your details to find best food near you'. The form contains three input fields:

- Full Name:** A text input field containing 'John Doe'.
- Email Address:** A text input field containing 'john@example.com'.
- Location / City:** A text input field containing 'e.g. New York, Mumbai'.

At the bottom of the form is an orange button labeled 'Continue →'.

It was a static website deployment of a restaurant website
now it will will open by link--<http://thesnm.shop/>
<http://thesnm.shop/>

Thank you
